

nippi Collagen

Premium Collagen Peptides

High Performance Health Benefits

Nippi Collagen offers benefits for multi-dimensional wellness and anti-aging applications that can have a profound effect on our overall quality of life. The beneficial effects of collagen peptides have been reported in numerous research findings for:

- Skin, nails and hair beauty*
- Support and mobility for bone and joint health*
- Muscle mass maintenance & sarcopenia*
- Sports and fitness – enrichment for recovery, lean muscle gain & optimum performance*
- Immune and digestive support*
- Weight management and satiety*

Proven Health Solutions

Collagen plays a vital role in the functions of nearly all of our system organs and tissues and is a key bioactive to renew cells in all areas of the body, including: the hair, skin, nails, eyes, teeth, cartilage, bones, tendons, organs, blood vessels, intestines and more.

Type I collagen is a unique bioactive peptide and is best known for providing the basis for beautiful skin, strong connective tissues and healthy bones. But the real advantage to collagen supplementation lies in its ability to enhance regeneration of the collagen cycle and stimulate cells to restore body tissues. A building block for all the body's systems, it also is a major component of membranes that surround and protect the internal organs, and of blood vessels, ligaments, tendons and bones. One-quarter to one-third of all the protein in the body is collagen protein.

Science has identified 28 different types of collagen. Type I collagen comprises about 75% of our body's collagen glycoproteins and is actually the principal type found throughout the body. Marine collagen is type I collagen and contains a unique combination of amino acids including hydroxyproline, glycine and proline – distinctive peptides that stimulate cells in the skin, leading to collagen synthesis through cell activation and growth.

Collagen Peptides: a Valuable Contribution to Healthy Aging

Nippi Collagen peptides provide the premium nutritional building blocks needed for youthful vitality and offer overall healthy aging support. As we age, our innate reserves of collagen are gradually depleted, resulting in a noticeable lack of skin firmness, loss of mobility in joints, and muscle tissue and bone loss. Collagen supplements supply the body with important amino acids that serve as the foundation to provide a range of health benefit solutions for the healthy-aging market and help limit the aging process.

The Nippi Collagen Difference

Nippi Collagen is an all-natural collagen peptide extracted from pure marine sources. At Nippi, we offer marine collagen peptides extracted through a complex proprietary natural hydrolysis process, resulting in the optimal low molecular weight for improved bioavailability and digestibility. Produced from 100% fish skin and scales that would otherwise be discarded, and sourced from a sustainable and traceable supply chain, Nippi Collagen is not irradiated and is certified non-GMO, presenting unmatched advantages in the market. Offered in a variety of grades and forms, Nippi Collagen is virtually tasteless and odorless, allowing it to be easily added to food, beverages and nutraceutical applications.

Setting the Standard for Bioactive Marine Peptides

With more than 100 years of experience in research and product development, our mission is to bring the world's most premium marine collagen to the North American health and wellness market.

To continue to create a high value difference, Nippi's research and development is continually advancing. In 1938, Nippi founded the BioMatrix Research Institute, which carries out world-leading studies on collagen peptides. Now an independent research foundation in Tokyo, Japan, the BioMatrix Institute promotes a greater understanding of the precise functions of extracellular matrices and the components of collagen.

In 1960, Nippi received a patent for pioneering the process of solubilizing collagen. Today, Nippi is dedicated to sustainable and responsible ways of doing business and the only collagen peptide to be certified by the Non-GMO Project. Nippi offers total quality assurance and support through expertise and technical know-how. Nippi's prolific research into the vast potential of collagen has yielded a flurry of novel application opportunities spanning the dietary supplement, functional food and beverage, medical, and cosmetic industries.

Nippi Collagen is suitable for a variety of dietary requirements
